DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 21-22, 24-32, 53-54, 56-64 and 71-72 are rejected under 35 U.S.C. 102(b) as being anticipated by Sano (U.S. Patent No. 5,701,897).

Sano teaches of an ultrasonic diagnosis apparatus and image displaying system for monitoring the movement of an organ comprising acquiring an electrocardiograph (13) which is electrical data representative of cardiac motion, an acceleration calculator (55) for acquiring non-electrical data representative of cardiac motion and an image system which can include data representative of respiratory motion (col. 7 lines 50-58). The system as taught by Sano is capable of detecting one or more periods of minimal motion (col. 2 lines 47-52).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3762

4. Claims 23 and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sano (U.S. Patent No. 5,701,897) as applied to claims 21-22, 24-32, 53-54, 56-64 and 71-72 above.

Sano teaches that the system is capable of being applied to different types of organs (col. 38 lines 56-60), and thus it would have been obvious to one having ordinary skill in the art at the time of the invention to modify the system as taught by Sano to include data of one or more proximate organs. Therefore, it would have been obvious to one having ordinary skill in the art to modify the system as taught by Sano to have the limitations of claims 23 and 55.

Response to Arguments

Applicant's arguments filed 5/30/06 have been fully considered but they are not persuasive. Applicant's assertion that one or more sets of motion data representative of respiratory motion is lacking from the Sano reference is without merit. Sano clearly suggests motion data comprising an ultrasonic diagnosis apparatus in which velocities of movement of an organ in motion of an object, such as a cardiac muscle of a heart and a blood vessel wall, are obtained and displayed and if necessary, on the basis of the velocities, other physical values representing conditions of the movement are calculated and displayed. Respiration is a physical value representing the condition of an organ (lung or diaphragm) in motion and exhibiting a velocity of movement.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3762

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
